

ABSTRACT

[Abstract]

[Problems]           The present invention provides a  
pharmaceutical composition for preventing or treating  
5 Th1-mediated immune diseases.

[Means for Solving]       There is obtained a pharmaceutical  
composition provided for prevention or treatment of  
Th1-mediated immune diseases, which comprises as an active  
ingredient a substance capable of acting on the NP receptor  
10 GC-A expressed on dendritic cells to enhance cGMP  
production and thereby driving T cells to differentiate  
into Th2-type cells by regulating cytokine production from  
dendritic cells.
